"From this it follows that beasts are either mere machines lacking perception, as the Cartesians
maintain, or they have an indestructible soul."

THE UNIVERSAL COMPUTER

THE ROAD FROM LEIBNIZ TO TURING

MARTIN DAVIS

CONTENTS

INTRODUCTION

If it should turn out that the basic logics of a machine designed for the numerical solution of differential equations coincide with the logics of a machine intended to make bills for a department store, I would regard this as the most amazing coincidence I have ever encountered.

—Howard Aiken, 1956[1]

Let us now return to the analogy of the theoretical computing machines . . . It can be shown that a single special machine of that type can be made to do the work of all. It could in fact be made to work as a model of any other machine. **The special machine may be called the universal machine.**

—Alan Turing, 1947[2]

BU3N THINGS ABOUT US

- everything is in github :D

bu3nAmigue
Creative coding collective
📍 Buenos Aires

- code-livin' la vida loca!

in a learning loop

- tools used when performing: mainly hydra and foxdot

bu3nos examples

- explore biological simulations /physics processes for making visual stuff

    - automatization of visual-music through OSC messages

- using random audio samples and video

- artificial voice synthesize r
